Dear Sir or Madam:

Enclosed please find a copy of the California Air Resources Board's (ARB) Harbor Craft Survey (survey). We are conducting this survey to update our information about crew, supply, and pilot vessels operating in Regulated California Waters. Information from this survey will be used by the ARB to better understand the current nature and magnitude of crew, supply, and pilot vessels as emissions sources. The updated information will also assist ARB staff in developing reasonable and cost-effective control strategies, if those strategies prove to be appropriate. We ask that you complete and return the survey to the ARB by March 15, 2008.

For the purposes of this survey, crew, supply, and pilot vessels are:

Crew Boats: self-propelled vessels used for carrying personnel to and from off-shore and in-harbor locations (including, but not limited to, off-shore work platforms, construction sites, and other vessels).

Supply Boats: self-propelled vessels used for carrying supplies to and from off-shore and in-harbor locations (including, but not limited to, off-shore work platforms, construction sites, and other vessels).

Pilot boats: self-propelled vessels used to taxi pilots out to ocean-going vessels.

These vessels could be those used for commercial purposes and/or to support public services. We are not collecting information for recreational vessels that are used solely for one's personal pleasure.

The survey is available in both hard copy and electronic form. A hard copy is enclosed, and an electronic version is available for downloading from our website at the following

The energy challenge facing California is real. Every Californian needs to take immediate action to reduce energy consumption. For a list of simple ways you can reduce demand and cut your energy costs, see our website: <http://www.arb.ca.gov>.
